

# Now Is the Time to Upgrade Your Electronics Systems. Have Your Install Done Over the Upcoming Holiday Season.

Intercoms, Sound Systems (Classroom IR, Gym, Auditorium, Football Field), Video, and Clock Systems

## SAVE TIME AND MONEY UPGRADE YOUR MULTICOM SYSTEM WITH QUANTUM

If you have a Bogen Multicom 2000 system, you can upgrade to Quantum Multicom IP and benefit in numerous ways:

- Build on your investment in Multicom by upgrading it instead of replacing it
- Save money because you can use the equipment that you already have installed instead of purchasing all new equipment\*
- Quantum's processor card is backward compatible so it fits and runs right in your Multicom rack
- 5-Year warranty on Quantum processor cards installed as upgrades
- Save time and money by eliminating timely and costly bidding processes and costs
- Quantum leverages your school's existing network investment

**Quantum provides all the features your Multicom system does AND adds the following:**

- Allows authorized administrators access to any computer, on- or off-site, using a browser-based IP approach
- Program and troubleshoot system from any computer on the network
- Any station can be programmed as a security station (for use with contact closure-triggered sensors such as motion detectors, magnetic switch sensors, etc.)
- Add intercom & phones to remote buildings (portable classrooms, athletic buildings, etc.) so there is no need to dig up blacktop if a network connection already exists
- System-wide or point-to-point communications across campus or throughout a district (for emergency and routine situations)
- Deploy VoIP phones throughout your network

It's easier, quicker, and more cost-effective to upgrade your Bogen Multicom system than it is to replace it.

Contact your Bogen sales representative to inquire about all the benefits a Quantum upgrade can provide for your facility.
