BOGEN

C4000 SERIES

RELEASE 3.0 NOW AVAILABLE

Bogen C4000 Series

IP-Based Paging and Audio Distribution Solution for safer, better facility management

The **Nyquist C4000 ver. 3.0 Software Release** represents another significant enrichment of Bogen's award winning Paging and Audio Distribution solution. Release 3.0 adds almost **70 new features** and enhancements to an already robust platform with broad applications for the commercial audio market.
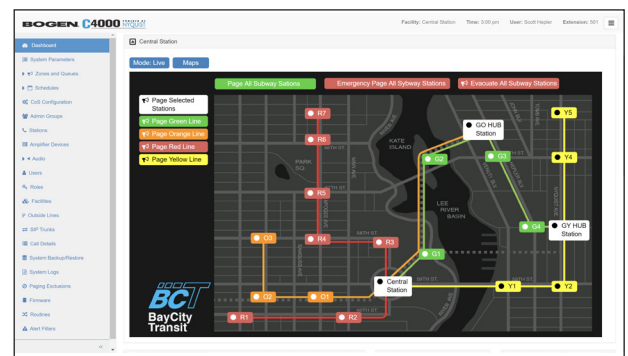

One of the most important new features introduced in this release is Automatic Failover capability to further improve upon system reliability and robustness. Additionally, the automated Routines and Routines API have been significantly enhanced to provide more flexibility and better support third-party integrations.

RELEASE 3.0 FEATURES

- **Enterprise-Wide Schedule Management** from a single interface allows administrators to remotely control what bell/event schedule is running at any facility throughout their network

- **Multi-facility Paging/Announcements** enables live or prerecorded communications across an entire enterprise for emergency or standard messaging

- **Automatic Failover Capability** (Server) reduces the loss-of-communications risk due to a single point-of-failure

- **Enhanced Routines/Routines API** includes the addition of many new event triggers and actions, in addition to enhanced security via encryption, SSL certificates and strong API keys

- **Display Graphic Images on GA10PV Displays** adds the ability to combine graphic images with text to improve the system's visual messaging capability

- **Tablet Based Zone Volume and Audio Distribution Control** provides users the ability to easily control zone volume and audio distributions to one or more zones via a simple to use dashboard that has been optimized for use with a tablet screen

- **Enhanced Pro-Audio Digital Signal Processing (DSP)** is embedded in all Nyquist Networked Audio Power Amplifiers, Public Address Mixer/Amplifiers, as well as the Matrix Mixer Pre-Amp

Clock/Messaging Display capability improves facility communications

Emergency Facility Check-In feature enhances building/site security
